

Project Design Phase

Solution Architecture

Solution Architecture:

The solution architecture automates the standard laptop procurement and configuration workflow in ServiceNow using Flow Designer. It connects the Service Catalog request, approval process, automatic Catalog Task creation, Hardware assignment, and laptop configuration into a consistent workflow.

Automate the Standard Laptop request and approval process through the Service Catalog.

Trigger Flow Designer after the Service Catalog request meets the configured trigger condition.

Automatically create a Catalog Task with the required description and assign it to the Hardware group.

Provide a consistent workflow for timely laptop configuration while reducing manual intervention and delays.
